

Another product from the Swedish Rock Poet Olle_XXL. The German title is a nod to all the people in Germany who suffer as badly as me from green fools - all the way up through the government. The Green fools may be just amusing until - *don't let us fertilize - cropping a good yield/ turn our world into a killing field* - actually without fertilizers a couple of billion people - mostly those recently risen from absolute poverty - would rapidly starve to death. The world's green aristocracy may not seem to be so harmless anymore...

This song is one in a series of songs about green fools, stupid women, whining self-claimed artists and cultural workers who are not worthy at all, but still try to rule my life and tell me what to do. Some of them are journalists, some are commies, some are greenies, some are politicians and many are lethal combinations thereof. I believe the best (legal) way to fight them is to mock them, rock on and piss them off. It might not really help, but at least we have fun while doing this. Oh, and I love everyone who downloads my music legally. I like those who download illegally and listen and like it. I dislike those who don't like it.

See www.ollexl.se for more information on Green Fools and other music from Olle_XXL. I can recommend the album Great Tit & Grey Pussy for more abusive rock'n roll. If this is not enough, songs are coming up about getting a new tattoo, sleeping through meetings, killing yourself, buying too many guitars, quitting drinking, getting a new liver etc. - scenes from the daily life of a rock star.

Green Fools (in Cm mostly) 2009-02-17

*Ch: Green fools - dancing in the sun/
Real men - whip them, make them cry and run*

They wanna run my world on light/ lie and cheat and will not stand and fight
they are too weak for work and strife/instead they tell you how to live your life
Green fools - Green fools

When they tell you not to drive your car/they don't know where from or who you are
and if you happen to be old or sick/organic shit - well that's their only trick
Green fools - Green fools

They steal our words and make them stink/sustainable is no longer what you think
it stands for girly stuff that they love to hear/nothing nuclear - that just gives them fear
Green fools - Green fools

OK the sun is not so very near/but still it's very very nuclear
don't let us fertilize - cropping a good yield/ turn our world into a killing field
Green fools - Green fools

(The solo guitar used is a Variax 700, probably set to Fender Stratocaster pos. 1. Recorded clean through a POD X3live and then re-amped using Pod farm (Auto disco wah + Run to the hills). The singing is all mine - the 'green' voices are eq:ed towards the hissy end, but most of the effects are just my singing at different ends of my vocal range. Drums etc. are BIAB, Cubase Studio 5 and computer.)
